

Instructions for Use of Lumin'Or 1-Phase Builder Gel *high viscosity* with silk technique

1. Push back and remove the cuticle with a Pro Pusher, cut if necessary with cuticle nippers.
2. Mattify the natural nail with Special File green pastel, 240 Grit.
3. Dehydrate the nailplate with NailPrep.
4. Apply a thin layer of 1-Phase Builder Gel and harden it for a short moment in the UV lamp.
5. Now cut the silk in form and apply to the nail. The silk should cover half of the nail and reach over the nail with the other half.
6. Apply 1-Phase-Gel on the silk so the complete silk on the nail is soaked. Fold back the outstanding silk and again cover it with 1-Phase-Gel.
7. After that fold out the silk again very carefully with a tweezer.

Now build up the nail in the usual way.

! Do not use additional Primer or Bonder. Lumin'Or acid free Gels have an integrated, multifunctional bonding system which work on hydrogenic bridges. This bonding mechanism could be inhibited.
